SPECIAL ISSUE: EMERGING TECHNIQUES
GUEST EDITOR: DAVID M. KRAMER

Introduction: Emerging techniques in *Photosynthesis Research*
D.M. Kramer **1**

Kinetic imaging of chlorophyll fluorescence using modulated light
L. Nedbal, J. Soukupová, D. Kaftan, J. Whitmarsh, M. Trtílek **3–12**

New applications of photoacoustics to the study of photosynthesis
S.K. Herbert, T. Han, T.C. Vogelmann **13–31**

Short-pulse pump-and-probe technique for airborne laser assessment of Photosystem II photochemical characteristics
A.M. Chekalyuk, F.E. Hoge, C.W. Wright, R.N. Swift **33–44**

Airborne test of laser pump-and-probe technique for assessment of phytoplankton photochemical characteristics
A.M. Chekalyuk, F.E. Hoge, C.W. Wright, R.N. Swift, J.K. Yungel **45–56**

Low-frequency fourier transform infrared spectroscopy of the oxygen-evolving complex in Photosystem II
H.-A. Chu, M.T. Gardner, W. Hillier, G.T. Babcock† **57–63**

Acclimation response of spring wheat in a free-air CO_2 enrichment (FACE) atmosphere with variable soil nitrogen regimes. 1. Leaf position and phenology determine acclimation response
N.R. Adam, G.W. Wall, B.A. Kimball, P.J. Pinter Jr., R.L. LaMorte, D.J. Hunsaker, F.J. Adamsen, T. Thompson, A. Matthias, S. Leavitt, A.N. Webber **65–77**

Acclimation response of spring wheat in a free-air CO_2 enrichment (FACE) atmosphere with variable soil nitrogen regimes. 2. Net assimilation and stomatal conductance of leaves
G.W. Wall, N.R. Adam, T.J. Brooks, B.A. Kimball, P.J. Pinter Jr., R.L. LaMorte, F.J. Adamsen, D.J. Hunsaker, G. Wechsung, F. Wechsung, S. Grossman-Clarke, S.W. Leavitt, A.D. Matthias, A.N. Webber **79–95**

Acclimation response of spring wheat in a free-air CO_2 enrichment (FACE) atmosphere with variable soil nitrogen regimes. 3. Canopy architecture and gas exchange
T.J. Brooks, G.W. Wall, P.J. Pinter Jr., B.A. Kimball, R.L. LaMorte, S.W. Leavitt, A.D. Matthias, F.J. Adamsen, D.J. Hunsaker, A.N. Webber **97–108**

Fluorescence clamp: A direct measure of fluxes into and out of the antenna pool of Photosystem II
K. Schinner, I. Giannikos, U.-P. Hansen **109–123**

Efficient light harvesting through carotenoids
T. Ritz, A. Damjanović, K. Schulten, J.-P. Zhang, Y. Koyama **125–144**

Dark-interval relaxation kinetics (DIRK) of absorbance changes as a quantitative probe of steady-state electron transfer
C.A. Sacksteder, D.M. Kramer **145–158**

Volume 66 No. 3 2000

Minireview

^{18}O and mass spectrometry in chlorophyll research: Derivation and loss of oxygen atoms at the periphery of the chlorophyll macrocycle during biosynthesis, degradation and adaptation
R.J. Porra, H. Scheer **159–175**

Regular papers

Evaluation of maize productivity considering solar energy use limitation by environmental factors
V.A. Mudrik, P. Stoyanov, B.N. Ivanov **177–187**

Electron spin-lattice relaxation studies of different forms of the S_2 state multiline EPR signal of the Photosystem II oxygen-evolving complex
G.A. Lorigan, R.D. Britt **189–198**

A mathematical model of C_4 photosynthesis: The mechanism of concentrating CO_2 in NADP-malic enzyme type species
A. Laisk, G.E. Edwards **199–224**

Selective quenching of the fluorescence of core chlorophyll–protein complexes by photochemistry indicates that Photosystem II is partly diffusion limited
R.C. Jennings, G. Elli, F.M. Garlaschi, S. Santabarbara, G. Zucchelli **225–233**
